

Exam project

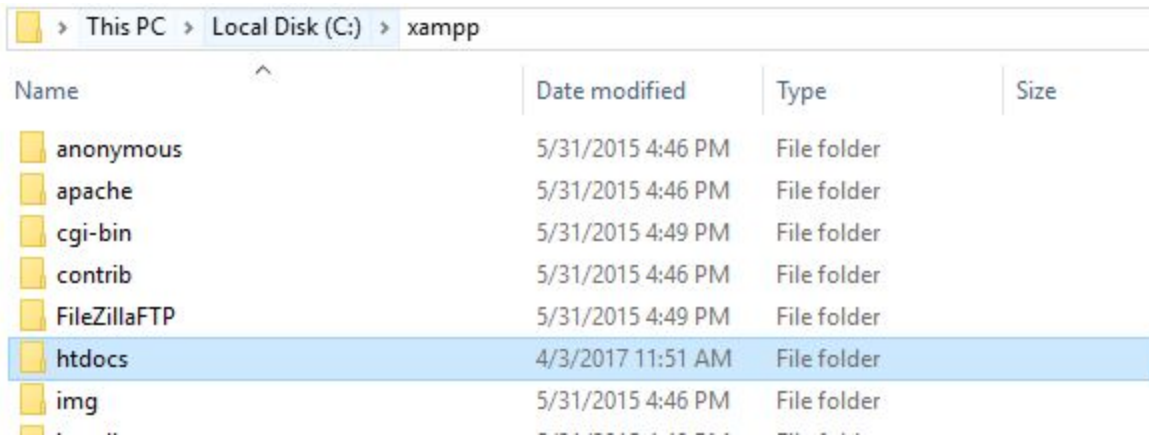

Real estate cms system

Matthew Skea

| | |
|---|----|
| How to run the project | 2 |
| The system is a single page app | 2 |
| The system has an API for creating properties and users | 3 |
| All the data for users and properties is saved to a text file | 4 |
| Users can login | 5 |
| Users can logout | 6 |
| Logged users can see properties | 7 |
| When viewing a property, google maps will load the property's location | 7 |
| Logged users can also edit and delete their own properties | 7 |
| Logged users can add new properties | 8 |
| Creating a property is validated | 8 |
| When creating a property, the user can upload one or multiple images | 9 |
| When a property is added, trigger a desktop notification along with a sound and a flashing page title | 9 |
| Logged administrators | 11 |

How to run the project

Copy the realestate.cms folder into your server root folder

Access the website through localhost/realestate.cms/

If you're using a unix system, give everyone permission to edit the folder.

The system is a single page app

Using php sessions and jquery I was able to develop a single page app that updates user sessions on refresh.

```

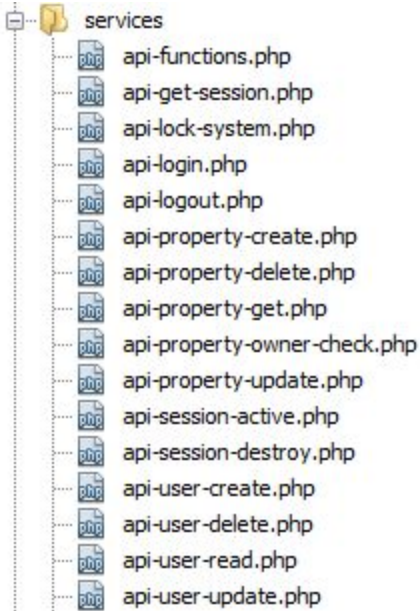

<!--*****-->
<!--*****NAVIGATION*****-->
<?php require_once "content/navigation.php"; ?>

<!--*****-->
<!--*****SECTIONS*****-->
<!--*****-->
<!--*****REGISTER PAGE*****-->
<?php require_once "content/register.php"; ?>
<!--*****-->
<!--*****LOGIN PAGE*****-->
<?php require_once "content/login.php"; ?>
<!--*****USERS PAGE*****-->
<?php require_once "content/users.php"; ?>
<!--*****USERS PAGE*****-->
<?php require_once "content/user-edit.php"; ?>
<!--*****-->
<!--*****PROPERTIES PAGE*****-->
<?php require_once "content/properties.php"; ?>
<!--*****ADD PROPERTY PAGE*****-->
<?php require_once "content/property-create.php"; ?>
<!--*****-->
<!--*****OVERLAY*****-->
<?php require_once "content/overlay.php"; ?>

```

The system has an API for creating properties and users

I have created an API for creating properties and users

All the data for users and properties is saved to a text file

Using php I write and edit data that is an a text file

```
/* DECODE THE STRING CREATED */
$jsonUser = json_decode($sUser);

/* BIND THE VALUES TO THE JSON */
$jsonUser->id = count($ajUsers) + 22325;
$jsonUser->email = $sEmail;
$jsonUser->fname = $sFname;
$jsonUser->lname = $sLname;
$jsonUser->mobile = $sMobile;
$jsonUser->password = $sPassword;
/* create json within json */
$jsonUser->userType->id = $sUserTypeId;
$jsonUser->userType->role = $sUserTypeRole;
$jsonUser->userType->icon = $sUserTypeIcon;

/* PUSH THE USER BEING CREATED INTO THE ARRAY */
array_push($ajUsers, $jsonUser);

/* CONVERT THE ARRAY OF JSON INTO STRING TEXT, MAKE THE TEXT READABLE AND SETUP
$sajUsers = json_encode($ajUsers, JSON_PRETTY_PRINT | JSON_UNESCAPED_UNICODE);

/* PUSH THE DATA TO THE FILE */
file_put_contents($sFileName, $sajUsers);

echo '{"status":"ok"}';
?>
```

Users can login

The image shows a web application interface. At the top, a dark green navigation bar contains three links: 'Login' (highlighted with a red box), 'Register', and 'Properties'. Below this, the main content area is titled 'LOGIN' in a dark blue header. The main content area is light gray and contains a login form. The form has two input fields: 'Email' with the value 'a' and 'Password' with the value '1'. Below the fields is a blue button with a white arrow icon and the text 'Login'.

Navigation Bar:

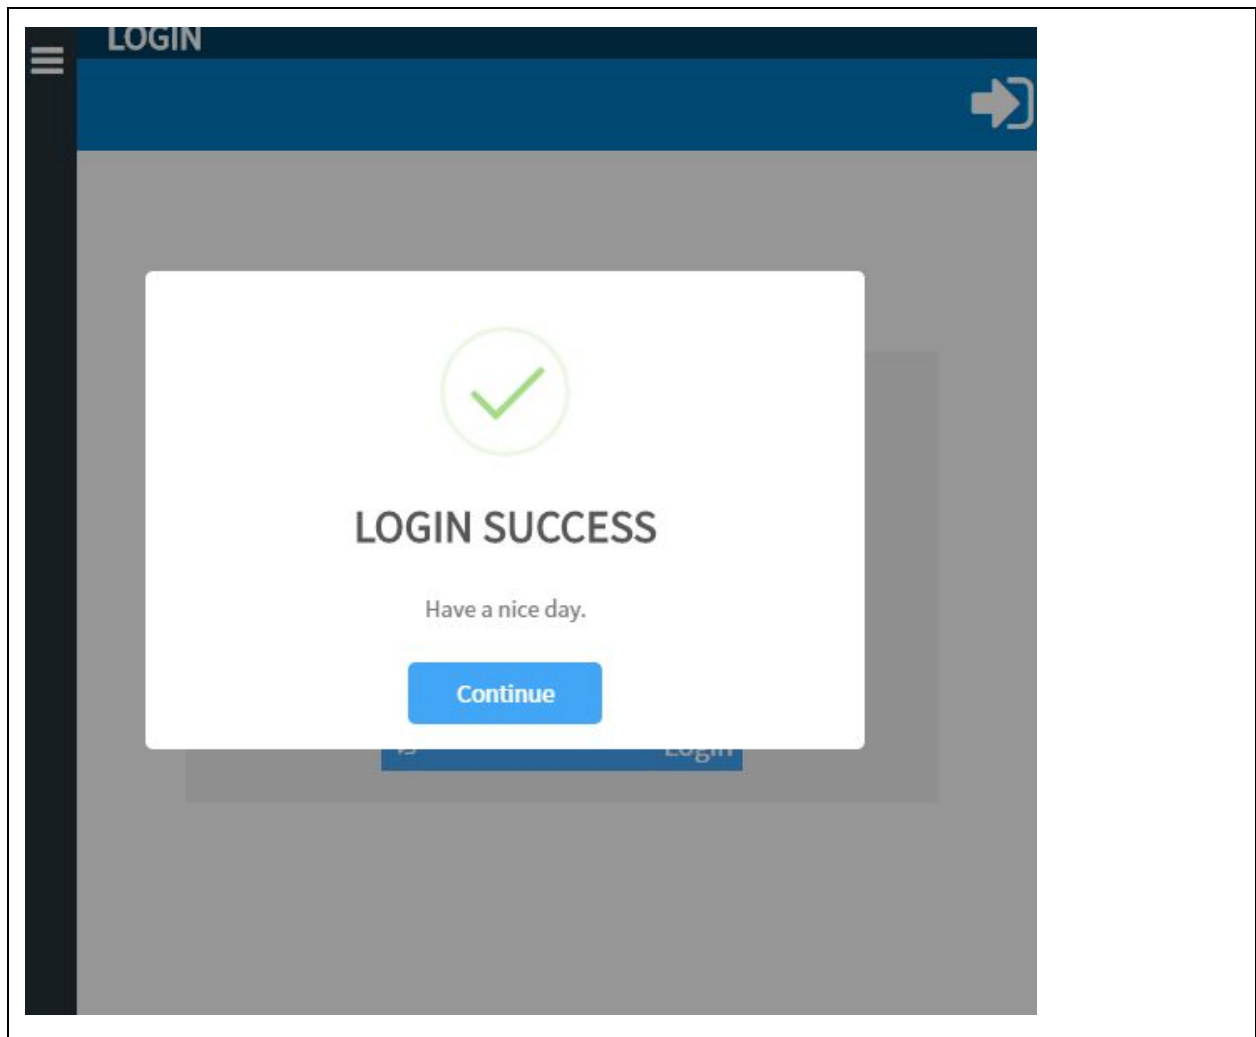

- Login
- Register
- Properties

LOGIN Page:

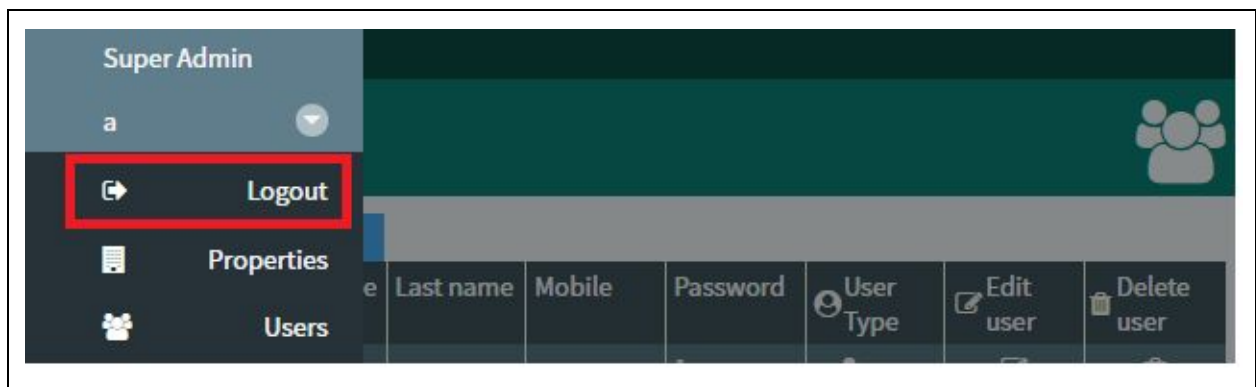

Email: a

Password: 1

Login

Users can logout

Logged users can see properties

| OUR COLLECTION OF PROPERTIES | | | | | | | | | |

Logged administrators

Logged admins can edit and delete any properties

Personally coded client side validation

```

/*****
/*VALIDATE ADDRESS*/
function fnValidateAddress() {
    /*get the address entered*/
    var sAddress = $("#txt-create-property-address").val();

    /*setup a regex algorithm for address , all characters, numvbers and \s*/
    var regex = /^[a-zA-Z+\s+0-9+.,,]{2,26}$/;
    /*test the address string*/
    var bRegexResult = regex.test(sAddress);

    /*if the address string fails the test, mark the input field*/
    if (!bRegexResult) {
        $("#txt-create-property-address").addClass("input-error");
        var sErrorMessage = "Please enter a valid street address and number!"
        /*append the error message to the DOM*/
        fnAppendErrorMessage(sErrorMessage);
    } else if (bRegexResult) {
        $("#txt-create-property-address").removeClass("input-error");
    }
    /*return the result*/
    return bRegexResult;
}

```

Use of a session

```

<div id="section-properties" class="section"
<!--
if (fnHasAccess(3)) {
    echo 'style="display:none;";
}
if (fnHasAccess(1)) {
    // echo 'style="display:none;";
    echo 'style="display:flex;";
}
?>

>

<!-- PROPERTIES PAGE LANDING IMAGE -->
<div id="article-properties-image" class="section-image">
    <div class="fa fa fa-building fa-3x"></div>
    <div class="fa fa fa-building fa-2x"></div>
</div>

```
